

## **Part A: RCTTCE Prompt**

### **R – Role**

You are a Senior Business Analytics Consultant with expertise in retail performance analysis, customer behavior, sales optimization, and executive reporting.

### **C – Context**

A retail company operates 30 stores and has experienced declining business performance over the last 18 months. The CEO has asked the Analytics Team to investigate the causes of the decline and identify opportunities for improvement. The company has provided a dataset containing approximately 50,000 records covering:

- Store performance metrics
- Product sales data
- Customer transactions
- Loyalty programme activity

The CEO needs an initial stakeholder brief before the detailed analysis begins.

### **T – Task**

Analyze the business situation and available data. Create a concise Stakeholder Brief that outlines:

1. A summary of the business problem.
2. Three key business questions that should guide the analysis.
3. The strategic decisions these questions will support.
4. A description of the available data and how it can be used.

### **F – Format**

Present the response as a professional one-page business brief with the following headings:

- Stakeholder Brief
- Situation Summary
- Key Business Questions
- Decisions Informed
- Available Data

Use concise business language suitable for a CEO.

### **Co – Constraints**

- Maximum 250 words.
- Do not make assumptions about specific findings because no analysis has yet been conducted.
- Focus on investigation priorities and decision-making needs.
- Use professional executive-level language.

## E – Example

Example business question:

"Which stores have experienced the greatest decline in revenue and customer traffic over the last 18 months, and what factors may explain the trend?"

Example decision informed:

"Determine whether specific stores require operational improvements, marketing support, or restructuring."

## Part B: Generated Stakeholder Brief

### Stakeholder Brief

#### Situation Summary

The company has experienced declining performance across its network of 30 retail stores over the past 18 months. To support evidence-based decision making, the Analytics Team will investigate operational, sales, customer, and loyalty program data to identify factors contributing to the decline and uncover opportunities for growth and efficiency improvements.

#### Three Key Business Questions

1. Which stores have experienced the largest declines in sales, customer transactions, and overall performance?
2. Which products, categories, or purchasing patterns are contributing most significantly to revenue changes?
3. How does customer loyalty program participation influence customer retention, purchase frequency, and spending behavior?

#### Decisions These Questions Will Inform

- Whether resources should be reallocated to underperforming stores.
- Which product categories require pricing, inventory, or promotional adjustments.

- Whether the loyalty program should be redesigned, expanded, or targeted toward specific customer segments.
- Which operational and marketing strategies can improve profitability and customer engagement.

### **Description of Available Data**

The dataset contains approximately 50,000 records covering store performance metrics, product sales, customer transactions, and loyalty program activity. These data sources will enable analysis of store-level trends, product performance, customer purchasing behavior, and loyalty engagement to identify drivers of declining performance and opportunities for business improvement.

### **Reflection**

I structured the prompt using the RCTTCE framework to provide clear guidance on the AI's role, objectives, and expected output. The constraints ensure the response remains concise and executive-focused, while the example helps the AI understand the level of analysis and business-oriented thinking required for a CEO-facing stakeholder brief.
